Abstract

“¡Hola y saludos a todos!”. Does listening to Mozart make us smarter? How could Beethoven go on composing when he became deaf? How are the places with the best acoustics? Is there music outside our planet? Music, science and new technologies, and their relation, are the central axis of *Longitud de Onda* (Wavelength), a unique radio programme in Spanish radio. The LDO “*astrónomo de cabecera*” recounts his wanderings and adventures at the Radio Clásica studio, accompanied by microphones, two awarded presenters and a grand piano (and, from time to time, some guests). “*Y que la Fuerza os acompañe*”.
